In physics, mainly quantum mechanics and particle physics, a spin magnetic moment is the Even though the neutron has a charge $q = 0$, its quarks give it a magnetic moment. $\mu_{S,z} = \mu_B$, while the (magnitude of the) total spin magnetic moment is, from (4), $\mu_S = \sqrt{3} \mu_B$, or approximately Bohr magnetons. In quantum mechanics, the expectation value is the probabilistic expected value of the result occurring (e.g. measurements which can only yield integer values may have a non-integer mean). It is a fundamental concept in all areas of quantum physics.

Quantum superposition is a fundamental principle of quantum mechanics. It states that, much like waves in classical physics, any two (or more) quantum states can ..
